

FINANCE SETUP

Installation Guide

Set up nogvia Finance on your computer — enter data in the panel, then export to the included Excel spreadsheet for reporting.

START HERE

This guide is for the host who purchased nogvia Finance. It explains how to extract, start and access the finance panel. It is not tax or legal accounting advice.

1. Before you start

You need a Windows, macOS or Linux computer, Python 3 and a modern web browser. Microsoft Excel or Google Sheets is optional until you export your data.

KEEP TOGETHER

Extract the full ZIP into one folder. Do not move only index.html; the panel needs its assets, spreadsheet template and start files in the same folder.

2. Windows installation

1. Extract the ZIP to a folder.
2. Open that folder and double-click **start.bat**.
3. Your browser opens nogvia Finance at **http://localhost:8081/**.
4. Keep the start window open while you work.

WINDOWS FIREWALL

If Windows asks for permission, allow access on Private networks so the local panel can run on your computer.

3. macOS and Linux

macOS

1. Extract the ZIP.
2. Double-click **start.sh**.
3. If macOS blocks it, right-click the file, choose Open, then choose Open again.

Linux

1. Extract the ZIP.
2. In a terminal in that folder, run **chmod +x start.sh**.
3. Run **./start.sh**.

PYTHON REQUIRED

If the start file says Python is missing, install Python 3 from python.org/downloads, then run the start file again.

4. First launch

When the panel opens for the first time:

1. Go to **Settings** and enter Host name, Currency and Reporting year.
2. Go to **Properties** and add at least one rental property.
3. Optionally click **Load sample data** in Settings to explore with examples.
4. Click **Export to Excel** (top-right) when you need the spreadsheet file.

5. Panel and spreadsheet

TWO PARTS

The Finance Panel saves data in your browser. Export to Excel copies your entries into the included spreadsheet template. They are not live-linked — export again whenever you want an updated file.

6. Quick troubleshooting

Python not found

Install Python 3, then start the panel again.

Browser cannot connect

Make sure **start.bat** or **start.sh** is still running. Use **http://localhost:8081/** (not 8080). Try another browser.

Export to Excel fails

Stay in the extracted folder. Do not delete **nogvia-finance-tracker.xlsx**. Disable pop-up blockers and try Chrome or Edge.

Data disappeared

Panel data is stored per browser. Use Import JSON in Settings if you have a backup, or export to Excel regularly.

First-launch checklist

1	ZIP extracted into one folder
2	Python 3 installed
3	Correct start file opened
4	Browser panel opens at localhost:8081
5	Start window remains open
6	At least one property added in Settings / Properties

After installation, open the separate User Guide for the full panel walkthrough.

Agreement

End-User License Agreement (EULA). Your Etsy purchase includes a personal, single-user right to use the nogvia software in your download package on your own computers for your own vacation rental properties.

You may not resell, redistribute, or share the software. You may not remove nogvia branding or use the software to create a competing product for sale. Commercial redistribution requires a separate written agreement from nogvia.
