

HOST GUIDE

User Guide

Build a digital guest guide for your rental — add property details, photos, Wi-Fi, house rules and local tips, then export a package for your guests.

READ FIRST

This guide walks you through the Guest Guide Builder on your computer. For install steps, open [installation-guide.pdf](#) first.

1. Your screen

When the app opens you see three main areas:

Left — Sections

- Lists every section in your guide
- Click a section to edit it
- Shows which sections are complete

Centre — Editor

- Fields for the selected section
- Click **Save** when a section is done

Right — Live preview shows how the guide looks on a guest phone and updates as you type.

Top header

- **Project name** and auto-save status on the left
- **Workflow timeline** in the centre — Template, Settings, Plan, Edit, Export ZIP, QR code
- **Save, Import JSON, Export JSON** and **Export ZIP** on the right

TWO QR CODES

The Phone / tablet QR in the preview panel is for you to edit on the same Wi-Fi. The guest QR is created later in the **QR code** workflow step after your guide is online. They are not the same code.

2. Workflow steps

Click any step in the timeline to jump to that part of the builder:

1	Template — load a starter guide or apply a different preset
2	Settings — appearance, property, Wi-Fi, host contact, emergency details, media library and project backup
3	Plan — choose sections, reorder your guide, add custom sections
4	Edit — fill in each content section
5	Export ZIP — download the guest package for hosting
6	QR code — enter your live website address and download the guest QR

Completed steps show a green check on the timeline. Your work auto-saves on this computer.

3. Templates

Click **Template** in the timeline to browse starter guides (Apartment, Villa, Hotel, Vacation rental, etc.). Click **Apply template** and confirm. This replaces your current project.

Tip: Export a JSON backup first if you already have work to keep.

4. Settings

Click **Settings** in the timeline. Use the left sidebar tabs:

- **Appearance** — brand name, logo, hero image, accent colour, theme
- **Property** — property name, type, bedrooms, bathrooms, guest count
- **Arrival** — check-in and check-out details
- **WiFi** — network name and password
- **Host contact** — phone, email, WhatsApp
- **Emergency** — emergency numbers and local contacts
- **Publish** — live guide address and guest QR (also opened from the QR code step)
- **Media library** — upload and manage images, PDFs and links
- **Project** — new project, reset, JSON backup and restore

Fill in each setup tab and click **Save section** before moving on.

5. Plan your guide

Click **Plan** in the timeline to arrange your guide structure.

Quick add

1. Pick a section type from the drop-down.
2. Click **Add section**.
3. Repeat until your plan is complete.

Reorder sections

- Drag cards up or down in the plan list, or
- Click **Open order map** for a full-screen reorder view with arrow buttons.

Custom sections

Click **Add custom section** for content that is not in the quick-add list. You can add as many as you need.

- **Text** — plain text shown in the guest guide. Save when done.
- **HTML** — paste custom HTML, preview as a printable page, print or download, then choose whether guests also see it in the guide.

Click **Save plan** when finished. The builder opens the first content section automatically.

6. Edit content

Click **Edit** in the timeline (or pick a section in the left list). Fill in the fields for each section and click **Save** in the section header. Check the live preview on the right after each change.

Common section types include Property Overview, Welcome, WiFi, Contact, Emergency, House Rules, Home Manual, Local Guide, Transportation, FAQ, Image, Gallery, YouTube Video, PDF, Google Map, Section Header, and layout blocks such as Tip, Warning and Checklist.

7. Media library

Open **Settings > Media library** to upload images, PDFs and icons, or add video, map and website URLs. Use **Import to section** on any asset to place it in your guide.

- **Remove from here** — unlink from one section only
- **Remove from all sections** — unlink everywhere
- **Delete from library** — permanent (only when unused)

8. Phone or tablet (optional)

1. Keep your computer on and the start window open.
2. Connect your phone to the **same Wi-Fi** as your computer.
3. Scan the **Phone / tablet** QR code in the preview panel.
4. Edit from your phone or tablet.

SYNC NOTE

Work on your phone is saved separately from your computer. Use **Export JSON** in the header on one device and **Import JSON** on the other to move a project.

9. Save and back up

- Work auto-saves in the browser on the device you use.
- **Save** — manual save from the header
- **Export JSON** — backup file from the header or Settings > Project
- **Import JSON** — restore a backup
- **Reset Project** — start over on this device (Settings > Project; export first)

10. Create the guest package

1. Click **Export ZIP** in the timeline or header.
2. Click **Generate Guide**.
3. A ZIP downloads (for example **guest-guide.zip**) with index.html, assets, qr.png and data files.

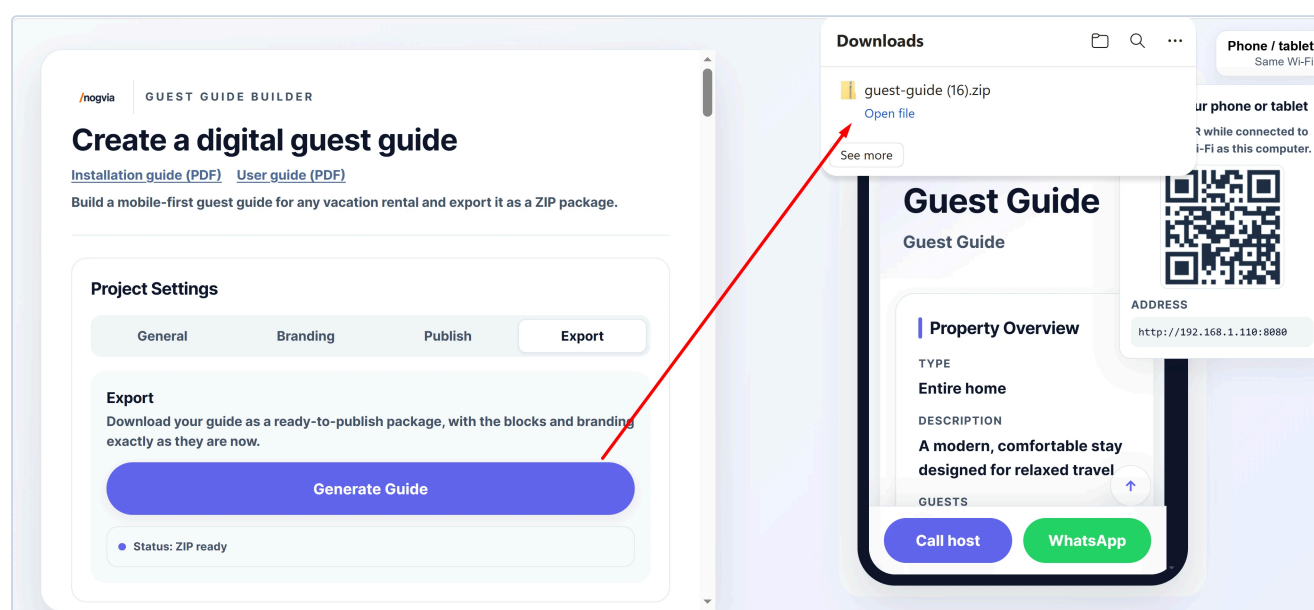

Figure 1 — Export your guide as a ZIP package.

Next, upload this ZIP to Netlify so guests can open your guide online. The builder does not host the guide for you.

11. Publish online with Netlify

Netlify offers a free plan for static websites. HTTPS is included automatically.

ZIP OR FOLDER

You can upload the **guest-guide.zip** file directly, or upload the unzipped folder. Both methods work on Netlify.

Step 1 — Sign in to Netlify

1. Open <https://www.netlify.com> in your browser.
2. Sign in or create a free account.

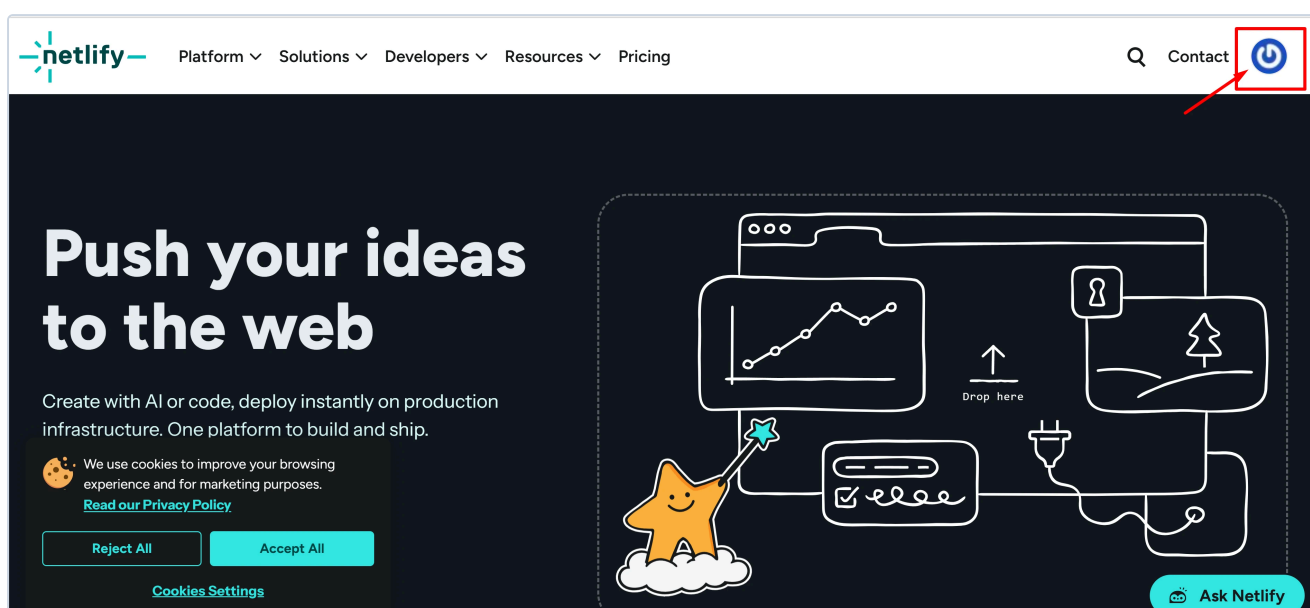

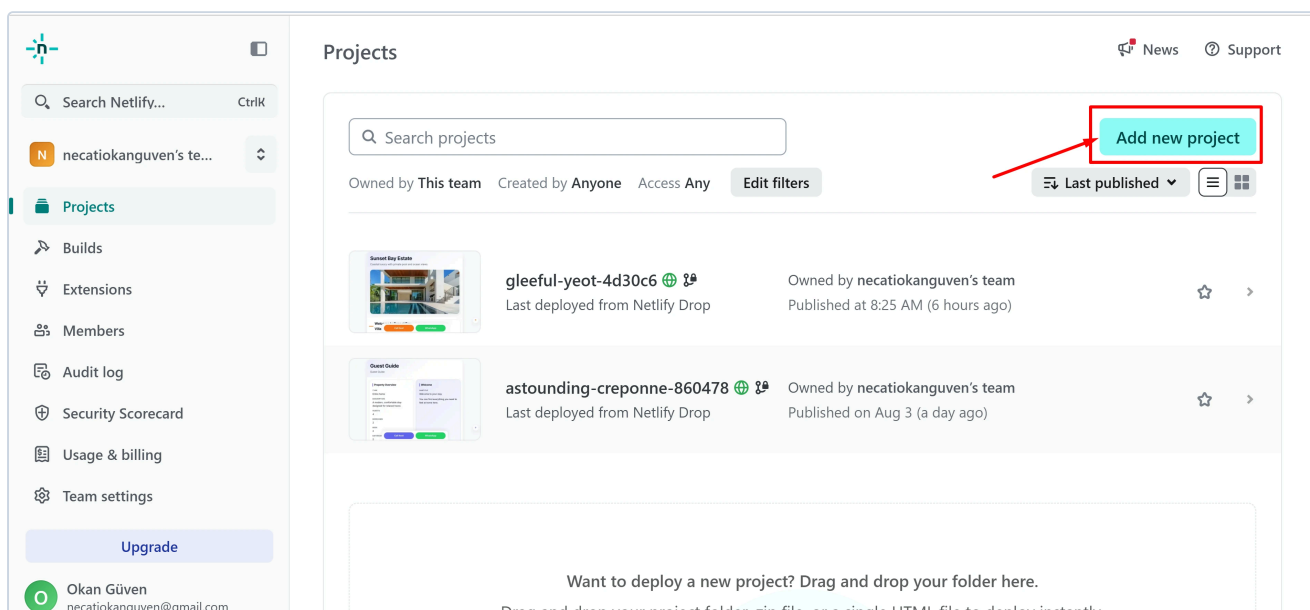

Figure 2 — Open Netlify and sign in to your account.

Step 2 — Start a new deploy

1. Go to **Projects** in the Netlify dashboard.
2. Click **Add new project**, or drag your ZIP onto the deploy area at the bottom of the page.

Step 3 — Upload your guest-guide.zip

1. On the project overview page, find the deploy area.
2. Drag **guest-guide.zip** into the box, or click **browse files to upload**.
3. Wait until Netlify finishes publishing the site.

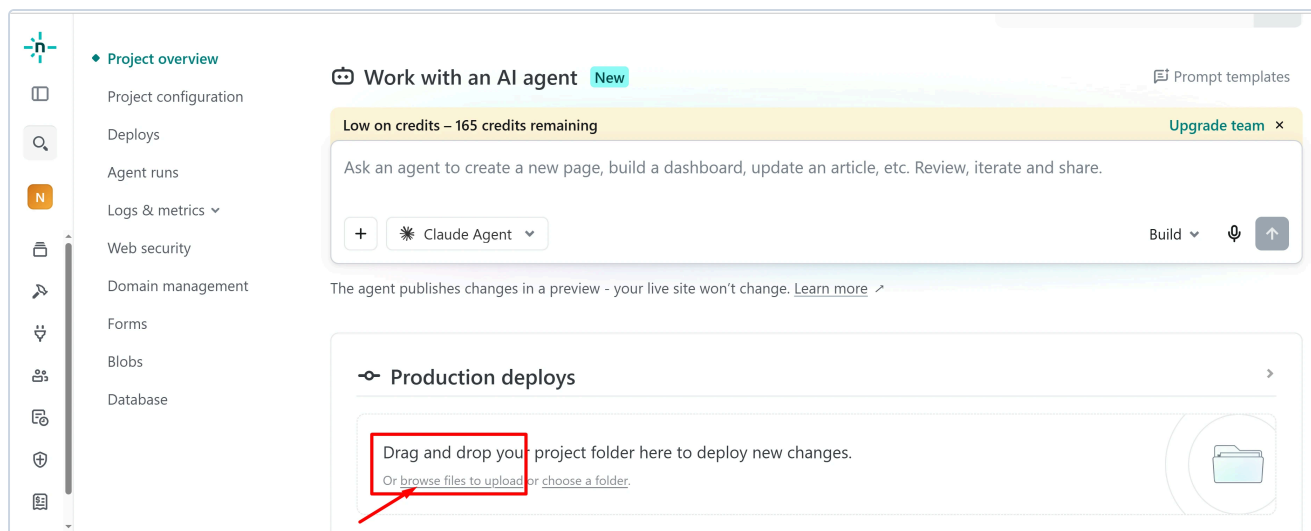

Figure 4 — Upload your ZIP file to deploy the guide.

Step 4 — Copy your live address

1. When the deploy completes, Netlify shows a live address such as **https://your-site.netlify.app**.
2. Copy the full https:// address — you will paste it into the builder in the next section.
3. Open the address in your browser to confirm the guide loads correctly.

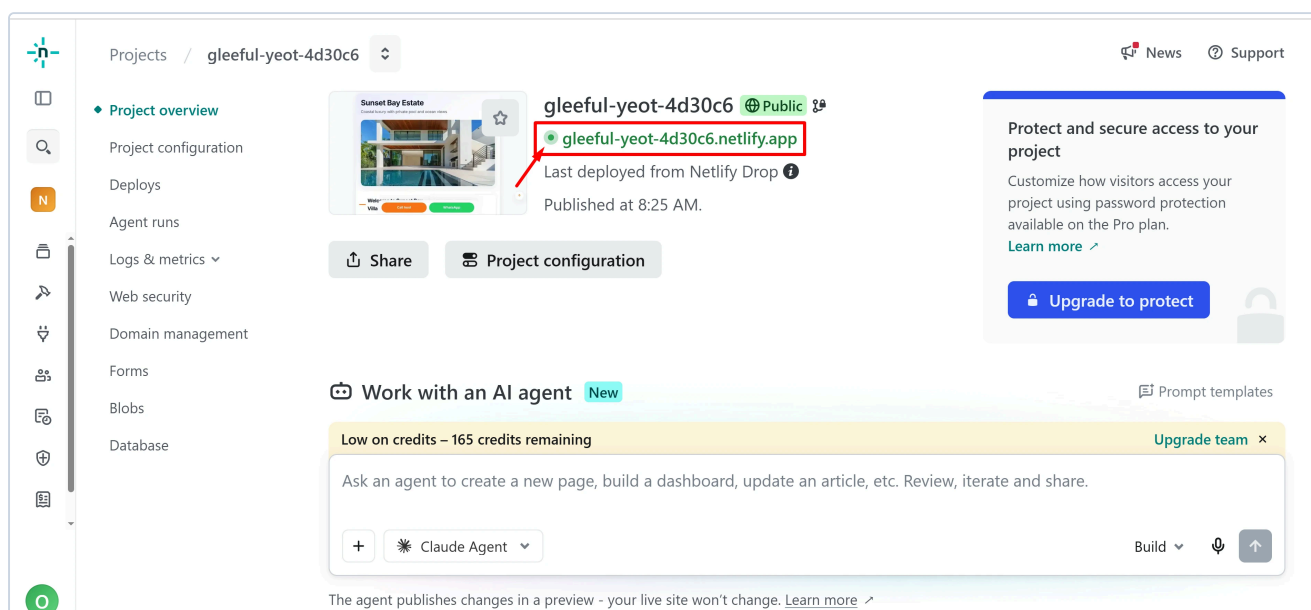

Figure 5 — Copy the published Netlify URL from your project overview.

12. Publish and guest QR code

1. After your guide is live on Netlify, click **QR code** in the workflow timeline (or open **Settings > Publish**).
2. Paste your **Published guide address** (must start with `https://`).
3. Click **Generate QR Code** and download PNG or SVG.
4. Print and place the QR in your property.

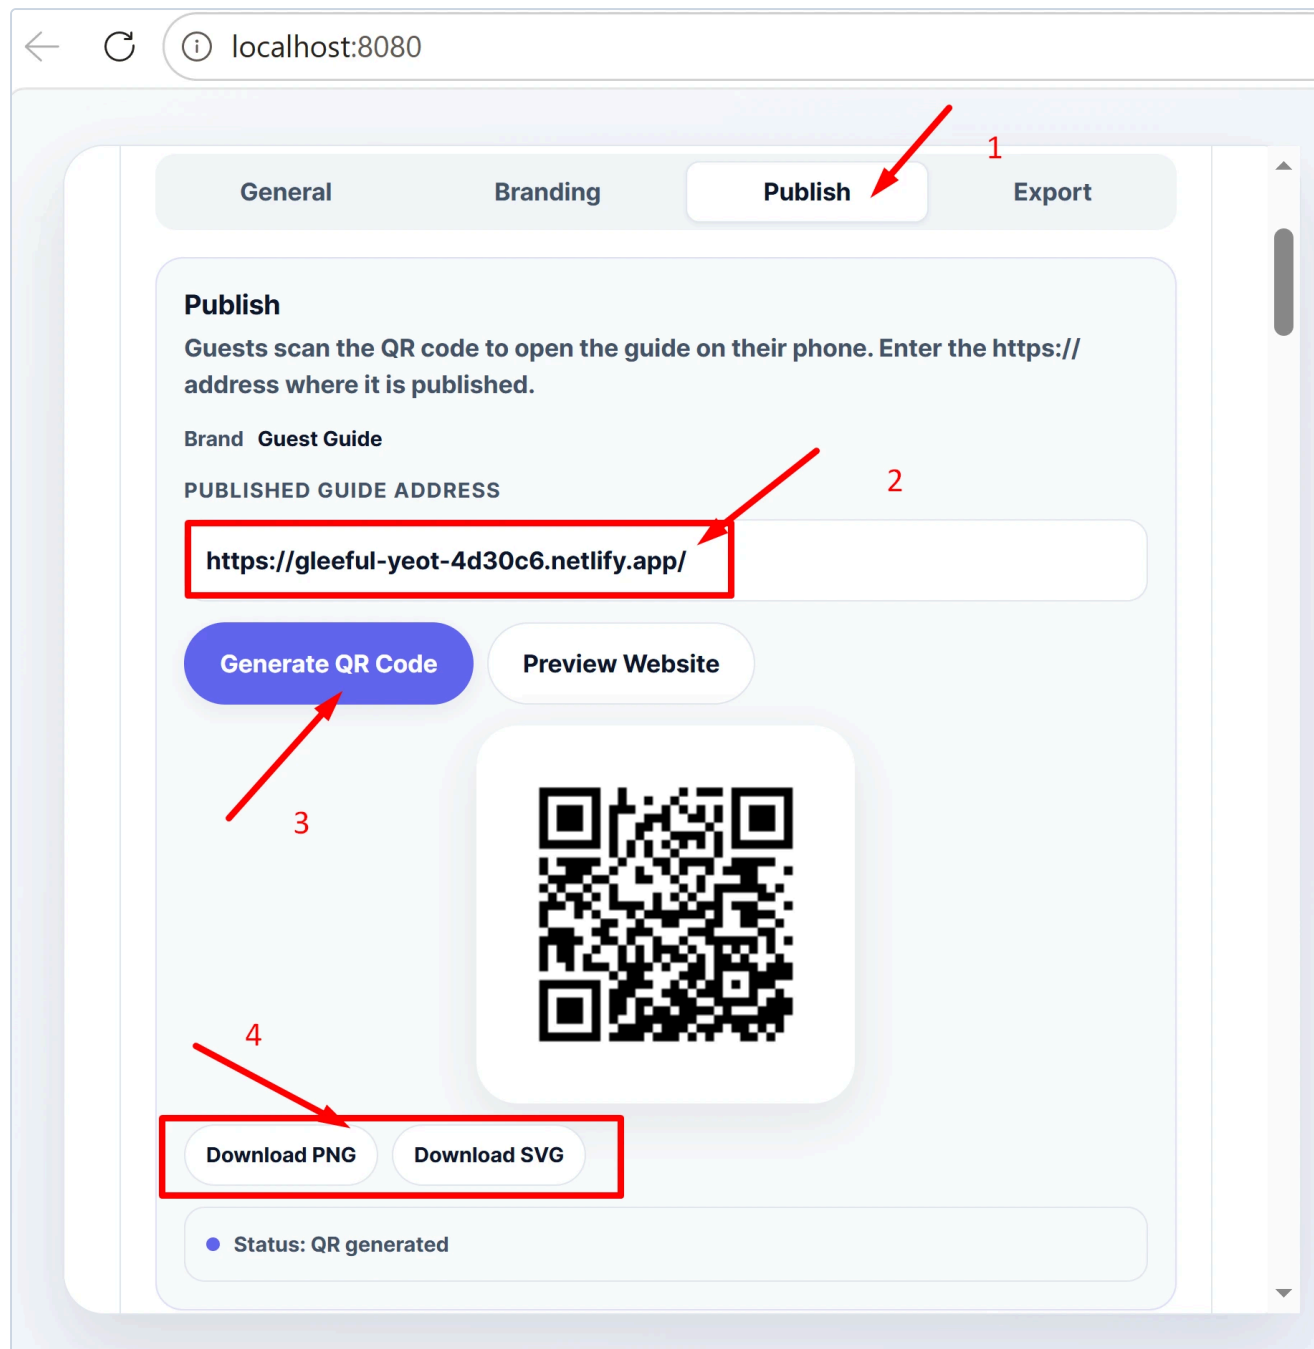

Figure 6 — Enter your live Netlify address, generate the guest QR code, and download PNG or SVG.

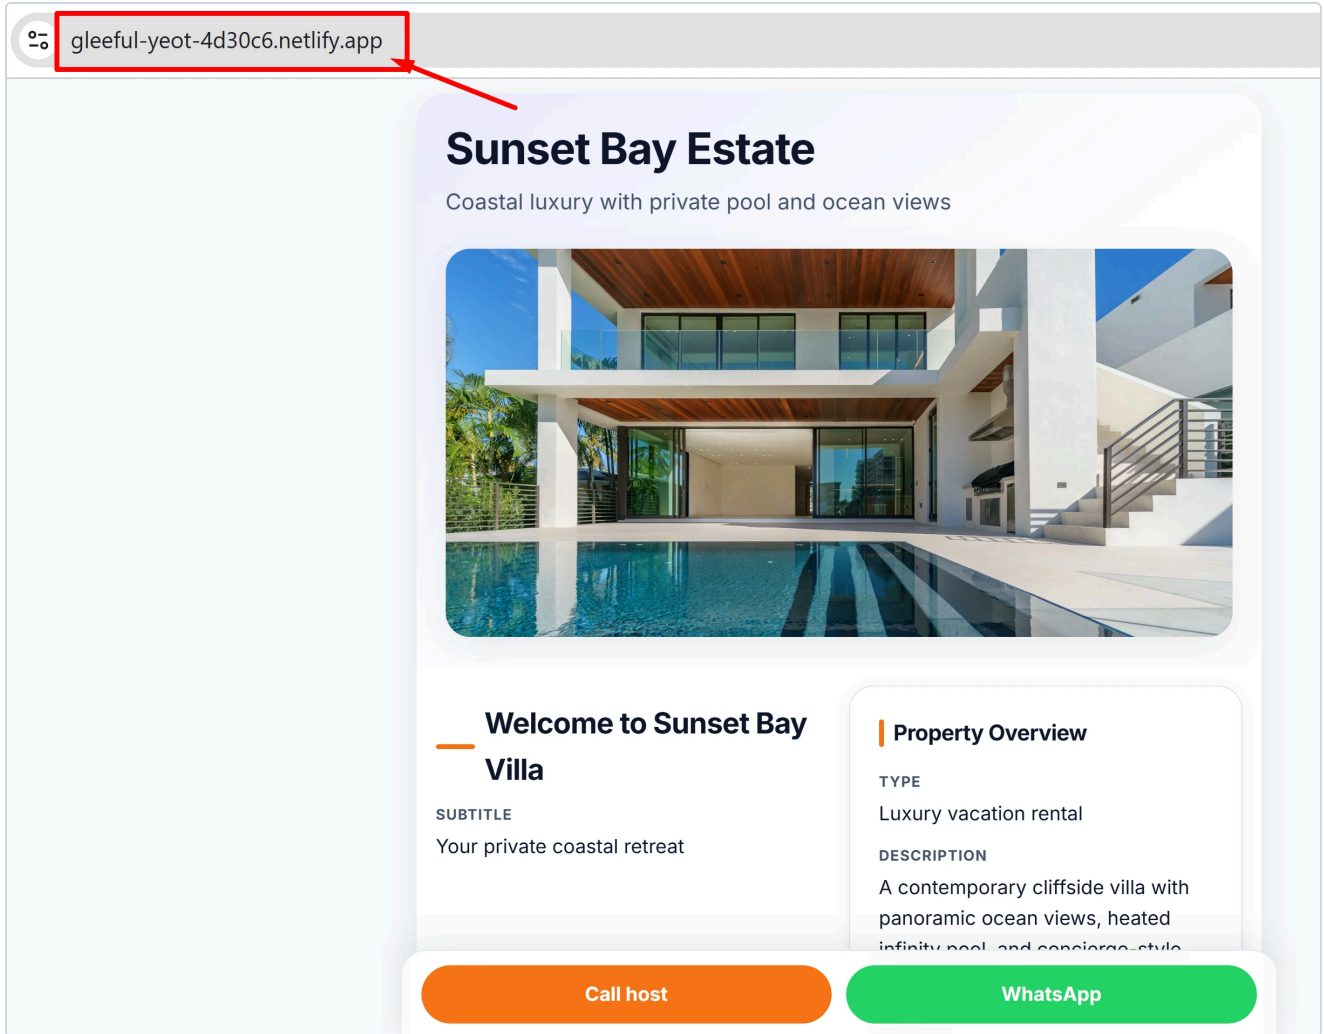

Figure 7 — Your guide is live. Guests open this address when they scan the QR code.

Use **Preview Website** in the Publish tab to confirm the live address works before printing the QR.

13. Suggested workflow

1	Start the app on your computer
2	Apply a Template or continue with a blank project
3	Complete Settings (appearance, property, Wi-Fi, contacts)
4	Open Plan — add, reorder and save your sections
5	Edit each section and click Save
6	Upload photos in Media library and check the phone preview
7	Export a JSON backup from the header
8	Click Export ZIP and generate the guest package
9	Upload guest-guide.zip to Netlify
10	Copy the live https:// address from Netlify
11	Click QR code , enter the address and download the guest QR

14. Tips

- Follow the workflow timeline — green checks show completed steps.
- Double-check Wi-Fi password and emergency numbers before exporting.
- Use Gallery for multiple photos; Hero image is the single large top photo in Appearance.
- Export JSON before big changes, template swaps or Reset Project.
- Keep the entire app folder together — do not move only index.html.
- On Netlify, you can upload the ZIP directly — unzipping is optional.

Agreement

End-User License Agreement (EULA). Your Etsy purchase includes a personal, single-user right to use the nogvia software in your download package on your own computers for your own vacation rental properties.

You may not resell, redistribute, or share the software. You may not remove nogvia branding or use the software to create a competing product for sale. Commercial redistribution requires a separate written agreement from nogvia.

See **eula.pdf** and **EULA.txt** in your package for the full terms.

Need help? See [installation-guide.pdf](#) and [README-HOST.txt](#) in your app folder. Support: reply to your Etsy order message.
